BiRotor Plus Single Case

SB25X 2" ANSI(DN50)

A Series Meters

General

The Single Case BiRotor Plus is an extremely accurate flow measuring device designed primarily for, but not limited to, ethanol blending. It produces a high resolution signal which is directly proportional to the rate of liquid flow through the meter utilizing non-wetted pick-offs. These signals can be shaped by a simple internal preamplifier for transmission to ancillary equipment.

Accuracy

PD meters are widely regarded as the most accurate meters on the market today. With a linearity of +/-0.15% and a repeatability of 0.02%, the A Series BiRotor Plus is ideal for liquid custody transfer applications.

Dependability

There is no metal to metal contact between the rotors and the measurement chamber. The meter is therefore extremely durable. The rotors, bearings and timing gears are the only moving parts. Maintenance requirements are the lowest in the industry.

Affordability

No premium for superior performance. Brodie offers the BiRotor Plus at a very competitive price.

Flexibility

The BiRotor plus meter can be installed either vertically or horizontally. It offers direct pulse output and it is field proven in thousands of installations.

Pressure Drop

To convert pressure drop value to the actual process fluid, use the following equation:

$$\Delta PA = (cPA)^{0.25} * (SGA)^{0.75} * \Delta Pm$$

Delta PA = Pressure Drop on Actual Fluid in PSI

cPA = Viscosity of Actual Fluid in cP

SGA = Density of Actual Fluid in SG

Delta Pm = Pressure Drop on Mineral Spirits
